Fireminds Launches Cayman Cloud with Logic Communications

George Town, Grand Cayman – Logic Communications and Fireminds recently announced the launch of the Fireminds Data Center in Cayman, bringing Fireminds co-location, cloud services, software-as-a-service solutions and managed services to the Logic Business Solutions portfolio in Cayman. Also, customers with operations in Bermuda and Cayman can now leverage the Fireminds data centers based in Bermuda and Cayman working with Logic and OneComm, allowing for unified cloud and network services.

In 2017, Fireminds became part of the Atlantic Telecom Network Inc. (ATNI) family of companies of which Logic and OneComm are also members. This facilitated a natural partnership in the form of Fireminds offering its cloud, co-location and IT services to Logic and their customers. Fireminds CEO, Michael Branco remarked, “We have worked closely with Logic through our operations in Bermuda. As we continue to expand throughout the Caribbean, we are growing our partnership network. Our familiarity with Logic and their dedication to serving their clients makes them a fantastic addition to our network and we look forward to continuing to work together in both Cayman and Bermuda.”

The two companies announced their newly formed partnership with a client targeted event for local business executives on May 1st 2018. The event, hosted by Logic Communications, served to introduce new cloud services offered by Logic via their strategic new partnership. Attendees were treated to an informational presentation on how the cloud is transforming businesses and how businesses can adapt accordingly.

The cloud focused event took place just in time for Fireminds to announce the launch of their new Cayman Data Centre. The Data Centre will serve to offer Logic clients cloud services including Managed IT, Disaster Recovery, Co-Location Services and Virtual Desktops. Logic CEO, Rob McNabb added, “We’re elated to bring Fireminds on as an industry partner. The Cayman Data Centre allows us to offer new products to our clients that were previously unavailable. We look forward to bringing the cloud to our customers and working alongside Fireminds to provide local businesses with viable technology options.”

The Fireminds Cayman data center is an ISO27001 certified facility and the Fireminds Bermuda data centers is an SOC2 certified facility and operation. In addition, Fireminds has a backup data center in its Halifax, Canada location in a carrier grade facility giving customers a number of cloud and hosting options for their IT needs. All facilities are cross connected with OneComm and Logic allowing for the cloud platforms to operate as one cloud fabric. This architecture allows customers to move workloads and data stores between locations utilizing our group company connectivity and Fireminds SD-WAN solutions. In addition, Fireminds data centers are connected to the Microsoft Azure platform allowing for faster access to Office 365 and Azure services for Fireminds customers.
